

**THE FOUNDATION  
FOR SECURE  
MARKETS®**

**ENCORE – Data Distribution  
Services (DDS) Guide  
Developer Reference I  
Non-Proprietary Transmissions**

**Version 4.2  
February 2024**

Reasonable measures are taken by OCC to ensure the accuracy of the information it distributes in its DDS program. This information is produced from data received from a number of different sources, which are believed to be reliable. However, due to the number of sources for such data, the possibility of human error, and the risks inherent in electronic distribution, there may be omissions or inaccuracies in such information and delays or interruptions in providing it. Accordingly, OCC disclaims all express or implied warranties with respect to the information distributed in its DDS program, including any warranty of merchantability or fitness for a particular purpose. Further, information sent on a real time basis should not be considered final until OCC issues an end of day message advising no additional transmissions will be made on a particular business day.

To read DDS FIXML messages, OCC recommends using an XML parser that adheres to the W3C<sup>1</sup> 1.0 and 1.1 XML recommendations and not the byte-by-byte method typically used for "flat file" parsing. In order to support new future business needs, OCC reserves the right to add at any time previously unused tags, which are already part of the FIXML schema, to the DDS FIXML messages. If the parsing mechanism recommended above is used, the addition of new tags will have no impact on the programs that read in the DDS FIXML messages.

For the following cases:

- Addition of new tags which are not part of the FIXML schema.
- Addition of new enumerations which are not part of the FIXML schema.
- Addition of previously unused enumerations which are part of the FIXML schema.
- Decommission/removal of existing required tags.

OCC will notify designated contacts in advance of their implementation. When needed, updated schemas will be made available, in advance, on the OCC website.

If you have questions or comments, please contact your Member Services representative or the OCC Help Desk at one of the following:

800-621-6072 or 800-544-6091 (U.S.)  
800-424-7320 (Canada)

## **Document Organization**

This document is one of a set of three intended to provide a detailed description of all aspects of the Data Distribution Services (DDS) system. The guides are available on at <https://www.theocc.com/clearance-and-settlement/data-distribution-service-reference>.

**Part One: ENCORE DDS Guide – Overview.** This section is intended for a reader that needs to understand the DDS system design concepts and the data delivery services.

**Part Two: ENCORE DDS Guide – Developer Reference I – Non-Proprietary Transmissions.**

**Transmissions.** This section is a non-proprietary transmission mapping reference for FIXML developers. This part of the guide includes FIXML elements, transmission layouts, message structures, and sample messages.

**Part Three: ENCORE DDS Guide – Developer Reference II– Proprietary Transmissions.**

This section is a proprietary transmission mapping reference for FIXML developers. This part of the guide includes FIXML elements, transmission layouts, message structures, and sample messages.

---

## **Glossary of Terms**

You should be familiar with the following terms prior to reading this guide.

**Batch** – In a computer, a batch job is a program that is assigned to the computer to run without further user interaction. In larger commercial computers or servers, batch jobs are usually initiated by a system user. Some are defined to run automatically at a certain time.

**DDS (Data Distribution Services)** – The DDS system supports both batch and real-time data delivery and utilizes the FIXML data formatting standard.

**ENCORE** – The clearing system utilized within OCC.

**Event Driven Processing** – A business event is a meaningful change in the state of the enterprise, such as the opening of a new customer account, clearing a trade, or the matching of a transfer. Event-driven processing is system behavior that is initiated by these business events rather than system events, such as time-based scheduling. Event-driven systems possess the following attributes: 1) Individual treatment of transactions; 2) Push delivery systems; and 3) Electronic notification.

**FIXML (Financial Information eXchange Markup Language)** – The XML derived grammar of the FIX protocol. A FIXML implementation includes message format validation, a clean, expressive structure, and leverages existing standards. The goal is to provide the ability to embed FIXML messages within traditional FIX headers and trailers.

**Messaging** – There are two major messaging server models: the point-to-point model and the publish/subscribe model. Messaging allows programs to share common message-handling code, to isolate resources and interdependencies, and to easily handle an increase in message volume. Messaging also makes it easier for programs to communicate across different programming environments (languages, compilers, and operating systems) since the only thing that each environment needs to understand is the common messaging format and protocol.

**Package** – A package is a collection of DDS transmissions that are grouped together based on selections made when the subscription was created.

**Pull Delivery Model** – In a pull information delivery model, the observer—or client—requests information from the information owner. An example of the pull delivery model is the download of a document from a webpage.

**Push Delivery Model** – In a push information delivery model, the information owner distributes the data to the observer as it deems appropriate. An example of push delivery is the sending and delivery of an email message.

**Real Time** – A level of computer responsiveness that a user senses as sufficiently immediate or that enables the computer to keep up with some external process (for example, to present trade data as trades are executed and cleared).

**Recipient** – The entity (Clearing Member Organization, Exchange, Regulatory Agency or Service Bureau) that owns the systems where DDS delivers data for processing or retransmission.

**STP (Straight-Through-Processing)** – The seamless integration of systems and processes to automate the trade process from end-to-end--trade execution, confirmation and settlement--without the need for manual intervention or the re-keying of data.

**Subscriber** – The entity (a Clearing Member Organization, Exchange, or Regulatory Agency) that requests a package of transmissions and owns the data that is transmitted to recipients.

**XML (eXtensible Markup Language)** – A simple and flexible text format derived from SGML (ISO 8879). Originally designed to meet the challenges of large-scale electronic publishing, XML also plays an important role in the exchange of a wide variety of data on the web and elsewhere. Special purpose XML languages and standards are commonly developed with several hundred already adopted since XML 1.0 was released in February 1998.

---

## **CFI Code Default Values**

To reduce the size of the document, the standard mapping and data values for the CFI code tag is presented below and not repeated throughout the document. Only in situations where the CFI code values differ from the default values below are the CFI code values detailed in the document.

OCC attempts to provide as much product information as possible through the CFI Code. However, since this field is part of an ISO standard, OCC must limit the amount of information provided to the confines of the standard.

## **CFI Code Mapping and Data Values**

CFI code mapping and data values for options, warrants, and futures appear below.

### **Options**

**CHAR1** = O

**CHAR2** = Put/Call Code

**CHAR3** = Exercise Style Code (A = AMERICAN, E = EUROPEAN)

**CHAR4** = Classification (S = EQUITY, I = INDEX, O = OPTION, F= FUTURE,  
D = DEBT)

**CHAR5** = Settlement Method (P = PHYSICAL, C = CASH)

**CHAR6** = Sub-Classification Standard / Non-Standard Settlement Designation (S = STD SETTLEMENT  
or N = NON-STD SETTLEMENT)

### **Warrants**

**CHAR1** = R

**CHAR2** = W

**CHAR3** = X

**CHAR4** = X

**CHAR5** = Put/Call Code

**CHAR6** = X

### **Futures**

**CHAR1** = F

**CHAR2** = F

**CHAR3** = Classification (S = EQUITY, D = DEBT, I = INDEX)

**CHAR4** = Settlement Method (P = PHYSICAL, C = CASH)

**CHAR5** = Standard / Non-Standard Settlement Designation (S = STD SETTLEMENT or N = NON-STD  
SETTLEMENT)

**CHAR6** = X

**Note:** As shown above, an X is used when a particular CFI code attribute does not apply to the use or context within a message.

## **Sample CFI Codes**

<b>Derivative Type</b>	<b>Classification</b>	<b>Sample CFI Code</b>
Futures	Equity	FFSPSX
Futures	Index	FFICSX
Futures	Debt	FFDCSX
Option	Equity	OXASPS
Option	Index	OXEICS
Option	Futures	OXAFPS

---

## Market Identifier Code Values

As of FIX 4.3, exchange codes used in FIX are those defined in the ISO 10383 standard: Market Identifier Code (MIC). A MIC value is used whenever exchange information is included in a message. The official standard and set of values are maintained by the ISO 10383 standard and any discrepancies below should be considered typographical errors. Always refer to the ISO 10383 standard for the correct set of values. As of the time of this publication the website link to view a current list of MIC values is: <https://www.iso20022.org/market-identifier-codes>.

**Note:** Refer to the current ISO 10383 standard for the complete list. The following list is a subset of the complete list and is designed primarily to support exchanges that interact with OCC.

Each of the following exchange names and their related exchange acronyms are mapped to a MIC.

### Exchange/MIC Mapping

Exchange Name	Exchange Acronym	MIC
BOX Exchange, LLC	BOX	XBOX
Cboe BZX Options Exchange	BATS	BATO
Cboe C2 Options Exchange	C2	C2OX
Cboe EDGX Options Exchange	EDGX	EDGO
Cboe Futures Exchange	CFE	XCBF
Cboe Options Exchange	CBOE	XCBO
MEMX LLC	MEMX	MXOP
MIAX Emerald, LLC	EMLD	EMLD
MIAX Options Exchange	MIAX	XMIO
MIAX PEARL, LLC	MPRL	MPRL
MIAX Sapphire, LL	SPHR	SPHR
Nasdaq BX Options	NOBO	XBXO
Nasdaq GEMX	GEM	GMNI
Nasdaq ISE	ISE	XISX
Nasdaq MRX	MCRY	MCRY
Nasdaq Options Market	NSDQ	XNDQ
Nasdaq PHLX, LLC	PHLX	XPHO
NYSE American Options	AMEX	XASE
NYSE Arca Options	ARCA	XPSE
Small Exchange, Inc.	SML	SMFE

---

## **Transmissions Overview**

This section provides the FIXML elements, transmission layouts, message structures, and sample messages for each transmission.

This document defines the following non-proprietary ENCORE transmissions:

- Start of Day Message, page 7
- Security Definition – Security Master – Full Product, page 8
- Security List – Security Master – Full Series/Contract, page 20
- Security Master Update (Incremental), page 30
- Security Definition – Eligible Securities Report, page 78
- Security Definition – Escrow Eligible Security Report, page 81
- Market Data Full – Open Interest, page 84
- Market Data Full – Prices, page 89
- Market Data Full – Early Composite Underlying Prices, page 97
- Market Data Full – Final Composite Underlying Prices, page 99

## **Layout Formatting**

Layouts in this document use arrows to indicate component block levels.

<b>Message Layout Legend – Component Block Level Examples</b>	
➔ Pty	One arrow precedes a component block that is one level down.
➔ ➔ Sub	Two arrows precede a component block that is two levels down.

---

## **Start of Day Message**

### **Overview**

OCC broadcasts the Start of Day message to all real-time users indicating that a new cycle has begun. The message is broadcast only once in any one cycle.

### **Sample Message – Start of Day**

```
<DDSSODMessage BizDt="2003-09-10" SchemaVer="FIX 4.4" Snt="2006-02-09T12:53:24-05:00"/>
```

---

## Security Definition – Security Master – Full Product

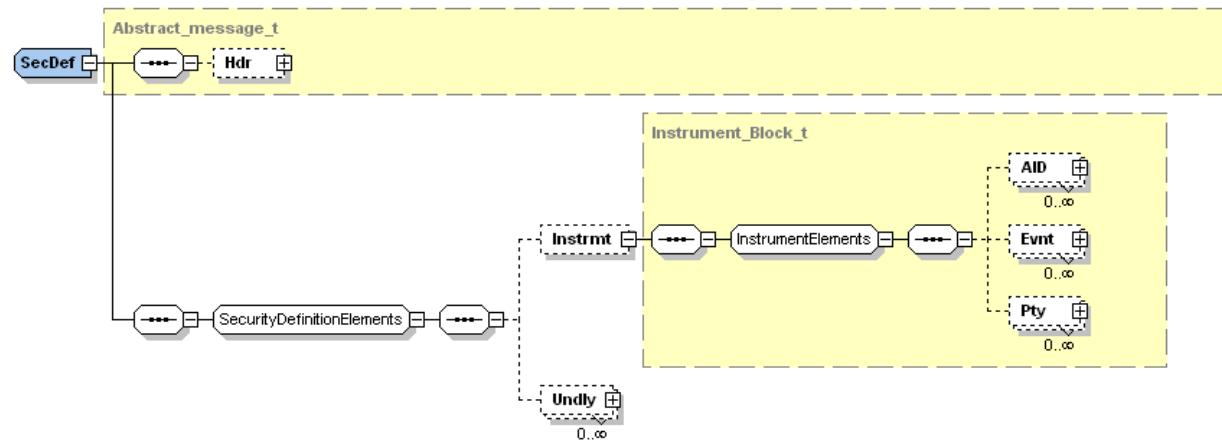

FIX Message:	Security Definition
Subscription Options:	Options Commodity Options Futures
Delivery Options:	Batch File

### Overview

Series information is available on the Security Definition Report. The Series Information file is separated into three transmissions: Full Product, Full Series, and Product/Series Updates. Likewise, the Futures Contract Information file is separated into three transmissions: Full Product, Full Series, and Product/Series Updates.

The Full Product transmission includes option or future product information such as the symbol, assignment method, exercise style, classification, position limit, near term limit, trade source listings, CUSIP, and allocation percentage. One message is created for each active or pending active product. It reflects any updates that may have been made during the day and is a snapshot of the OCC product database at the end of the business day.

### Message Structure

## Message Layout – Security Definition – Options

Security Definition – Options								
FIX Mapping						Data	Data Type	Sample Data
Tag #	Report Block	Component Block	Sub Component Block	Sub Sub Component Block	Fields			
	SecDef							
964					RptID	Unique Identifier of the Security Definition report.	String	2001096
715					BizDt	Clearing Business Date	LocalMktDate	2004-10-07
15					Ccy	Currency (ISO currency code) used for Price	Currency	USD
	→ Instrmt							
55					Sym	Symbol	String	IBZ
					Desc	Sub-Classification STAN = Standard BINY = Binary FLEX = Flex RNGE = Range	String	STAN
107					CFI	Default Values (refer to page 3)	String	OXASPS
461					StrkCcy	Strike Currency	Currency	USD
947					StrkMult	Strike Multiplier	Float	1
967					Mult	Market Trade Value	Float	100
231					StrkValu	Strike Value	Float	100
968					SettlOnOpenFlag	Settle On Open Flag (Y / N)	String	N
CUST					RngLen	Range Length – Range Options	Float	50
CUST					RngIntvl	Range Interval – Range Options	Float	10
744					AsgnMeth	Assignment Method (R=Random, P=ProRata)	Char	R

## Security List – Security Master – Full Series/Contract

FIX Message:	Security List
Subscription Options:	Options
	Commodity Options
	Futures
	Trade Sources
Delivery Options:	Batch File

### Overview

Full series/contract information is available on the Security List Report. The Full Series/Contract transmission includes option series, futures contract or trade source series. One message is created for each active or pending active option series, futures contract or trade source series. It reflects any updates that may have been made during the day and is a snapshot of the OCC product database at the end of the business day.

### Message Structure

## **Security Master Update (Incremental)**

FIX Message:	Security Definition Update
	Security List Update
Subscription Options:	Options
	Commodity Options
	Futures
Delivery Options:	Batch
	Real Time

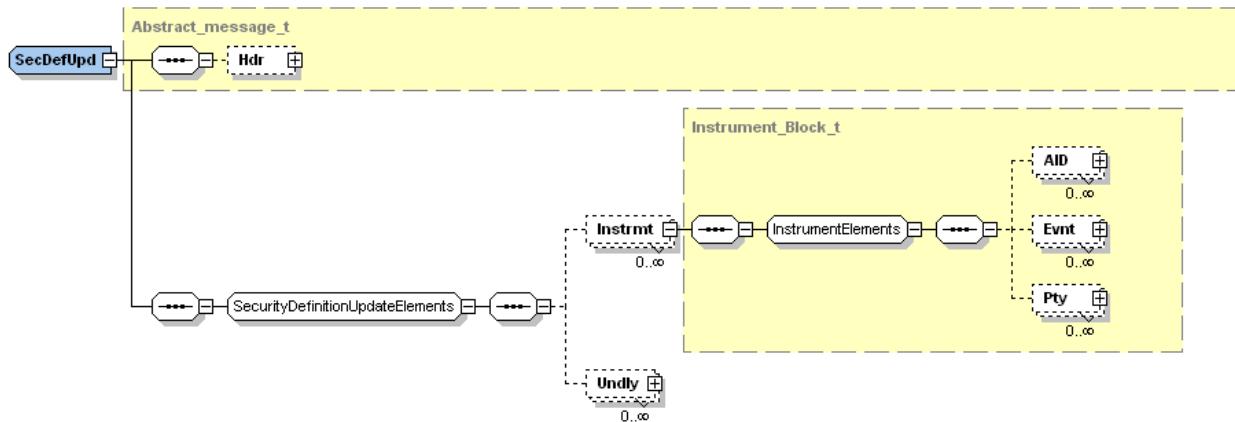

### **Overview**

The Security Definition Update Report includes all updates made to an option or future product such as symbol changes, position limit changes, trade source listing changes, or underlying deliverable changes. The Security List Update Report includes all updates made to an option series or future contract such as new series, deleted series, strike price changes, or ticker symbol changes. In both of these reports, the Instrument block includes updated information to the product or series. In determining how to process the block, the user must look at the Status. The updates are processed as follows:

- If the action is **ADD**, then there is one Instrument block listing the new product/series.
- If the action is **MODIFY**, then there are two Instrument blocks: one block listing the pre-change product/series and one block listing the updated product/series.
- If the action is **DELETE**, then there is one Instrument block listing the deleted product/series.

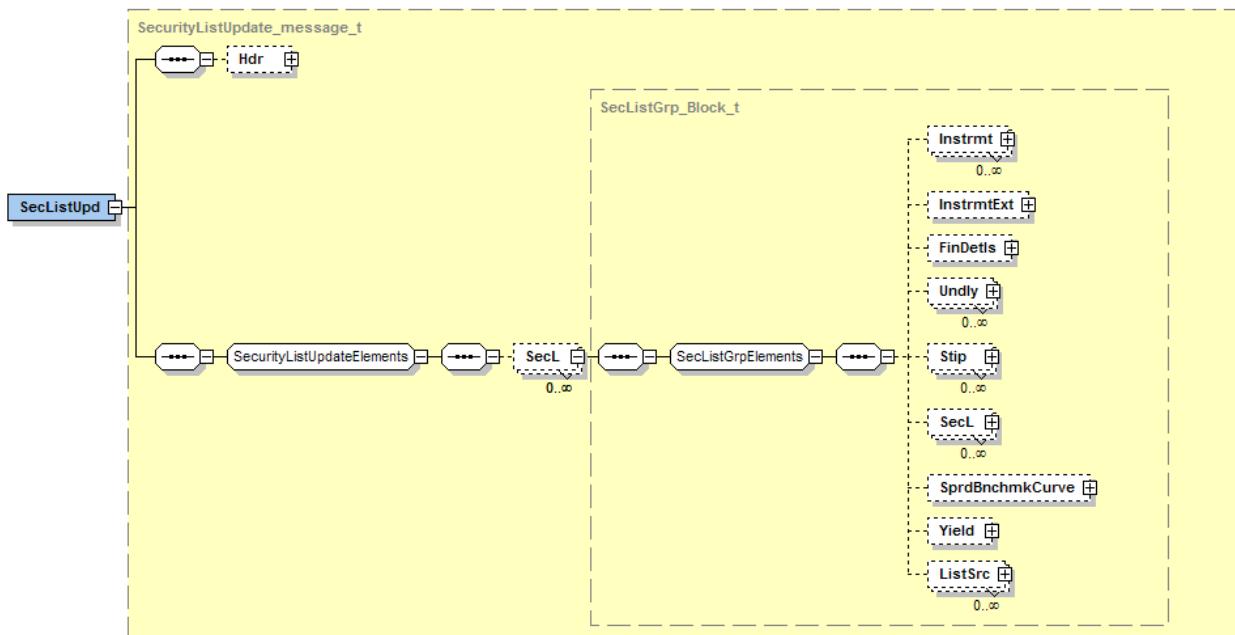

If a Clearing Member subscribes to the updates, they receive both the Security Definition Update Report and the Security List Update Report. Both product and series/contract information are included in one transmission.

## Message Structure – Security Definition Update

## Message Structure – Security List Update

**NOTE:** The below graphic includes all SecL subcomponent blocks that are available in the FIXML schema. However, OCC does not use all available subcomponent blocks.

### **Sample Message – Security Update – Futures Product and Contract – End-Of-Day Futures Transmission \***

```
<DDSEODMessage BizDt="2003-09-10" MsgTypeCode="SECUPD" SchemaVer="FIX 4.4" TransProductSet="FUTU"  
NoMessagesSent="17"/>
```

### **Sample Message – Security Update – Options Product and Contract – End-Of-Day Option Transmission \***

```
<DDSEODMessage BizDt="2003-09-10" MsgTypeCode="SECUPD" SchemaVer="FIX 4.4" TransProductSet="OPTN"  
NoMessagesSent="125"/>
```

\* The number of messages sent on the End-Of-Day Security Update transmissions reflect totals of both product and series/contract messages because these messages use the same Transmission ID.

## **Implementation Considerations**

### **Corporate Actions Processing**

#### Products

A Security Definition Update message with an Update Action of Add is generated for the new product. This message includes a single Instrument block with a status of Active. No notification is made of the adjusted product since OCC will continue to maintain the product as active for an undetermined amount of time due to possible processing issues. If the product is made inactive at some later date, the inactivation will be sent to DDS subscribers at that time but the relationship to the corporate action will not be communicated.

#### Series/Contracts

A Security List Update message with an Update Action of Modify is generated to show the modification of the Inactivate Date on the old series or contract. This message includes two Instrument blocks: one with a status of 2 (Old) and another with a status of 1 (New).

A Security List Update message with an Update Action of Add is generated for the new series or contract. This message includes a single Instrument block with a status of 1 (New).

A Security List Update message with an Update Action of Modify and the appropriate Corporate Action code is generated to show the relationship between the newly *activated* instrument and the newly *inactivated* instrument. This message includes two Instrument blocks: one with a status of 2 (Old) and another with a status of 1 (New).

On deletes and modifies with status = 2, database lookups are not performed for certain fields. The specific series info (product symbol, CFI Code, expiration date, strike, and activation date) should be used as a key for lookup on the DDS system.

## Corporate Action Codes

Corporate Action Type	DDS (FIX Enumeration)
Cash Dividend	F
Stock Dividend	G
Non-Integer Stock Split	H
Reverse Stock Split	I
Standard-Integer Stock Split	J
Position Consolidation	K
Liquidation Reorganization	L
Merger Reorganization	M
Rights Offering	N
Shareholder Meeting	O
Spinoff	P
Tender Offer	Q
Warrant	R
Special Action	S
Symbol Conversion	T
CUSIP / Name	U
Position Consolidation Symbol Conversion	K T
Wrap	Not Applicable

In addition to the changes to corporate action code indicators, additional considerations must be defined for Corporate Actions processing. Due to the way that a Corporate Action is processed in the ENCORE system, a CA adjustment that requires a new instrument to be listed by the OCC would create the following FIXML message flow:

An example of the SecListUpd message flow resulting from a 2-for-1 Stock Split Corporate Action follows:

**(1) Modify message reflecting the new Inactivate Date for the Series that is to be split.**

```
<SecListUpd RptID="7038501" UpdActn="M" BizDt="2004-10-07">
  <SecL>
    <Instrmt Status="2" Sym="VLO" CFI="OPXXXX" MMY="20050122" MatDt="2005-01-22"
StrkPx="15">
      <Evnt EventTyp="5" Dt="2004-07-12"/>
    </Instrmt>
    <Instrmt Status="1" Sym="VLO" MMY="20050122" MatDt="2005-01-22" CFI="OPASPS"
StrkPx="15">
      <Evnt EventTyp="5" Dt="2004-07-12"/>
      <Evnt EventTyp="6" Dt="2004-10-08"/>
    </Instrmt>
  </SecL>
</SecListUpd>
```

**(2) Add message reflecting the new Series (post-split).**

```
<SecListUpd RptID="7038502" UpdActn="A" BizDt="2004-10-07">
  <SecL>
    <Instrmt Status="1" Sym="VLO" MMY="20050122" MatDt="2005-01-22" CFI="OPASPS"
StrkPx="7.5"
```

**(3) "Link" Modify message reflecting the Series being inactivated and the new series being added including a Corporate Action code used to communicate the type of corporate action that gave rise to the changes.**

```
<SecListUpd RptID="7001116" UpdActn="M" CorpActn="J" BizDt="2004-10-07">
  <SecL>
    <Instrmt Status="2" Sym="VLO" CFI="OPXXXX" MMY="20050122" MatDt="2005-01-22"
StrkPx="15"StrkPx="7.5"
```

## **Uniqueness Checking**

The nature of real time messages creates the possibility of multiple messages per series update. Therefore, recipient systems must review the following fields and check for uniqueness against previously processed security update messages for the current processing day.

- RptID
- BizDt
- CorpActn (for Series/Contracts only)

---

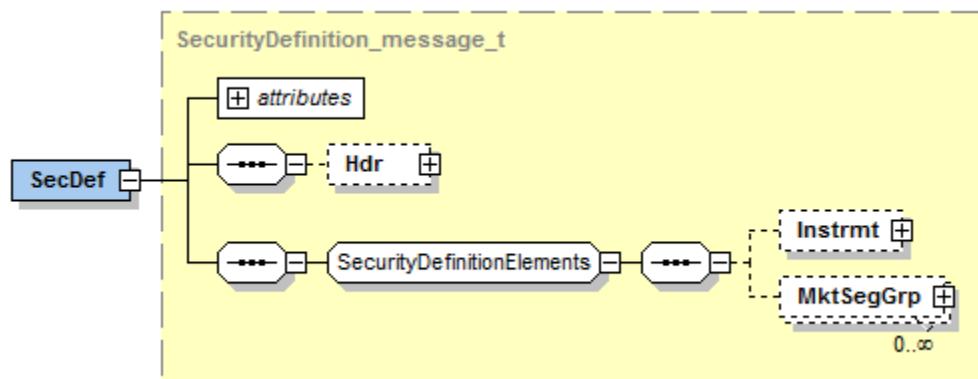

## Security Definition – Eligible Securities Report

FIX Message:	Security Definition
Subscription Options:	Equity
Delivery Options:	Batch File

### Overview

Eligible securities information is available on the Security Definition Report. The Eligible Securities file provides a list of all securities which are eligible for stock loan and/or collateral. The message includes the symbol and CUSIP for each security.

## Market Data Full – Open Interest

FIX Message:	Market Data Snapshot Full Refresh Report
Subscription Options:	Commodity Options
	Equity/Index Options
	Futures
Delivery Options:	Batch File

### Overview

Open Interest information is available on the Market Data Snapshot Full Refresh (Market Data Full) Report. For each active option series or futures contract, one message is created indicating the open interest quantity. If the contract or series has an open interest quantity of 0 (no positions), the process still creates an Open Interest message.

### Message Structure

</MktDataFull>
```

## **Implementation Considerations**

### **General**

All Option Price Reports include flex options for their respective product set. For example, the Equity/Index Option Prices transmissions include prices for both standard and flex equity/index options.

### **The Full Block**

The <Full> block for Options and Futures Price records breaks down as follows:  
Options

Instance #1 – Current mark price (calculated price of the option).

Instance #2 – Current settlement price (calculated price of the underlying component).

Optional

Instance #3 – Current open settlement price (for settle on open option series only).

**Note:** For Binary Series, the VWAP price is displayed when Market Data Type = 4 (Typ = “4”).

This block is present for settle on open series under the following conditions:

- Flex Series or Special Dated Options → Current Business Date = Expiration Date
- Standard Series or Binary Series → Next Business Date = Expiration Date

---

## Market Data Full – Early Composite Underlying Prices

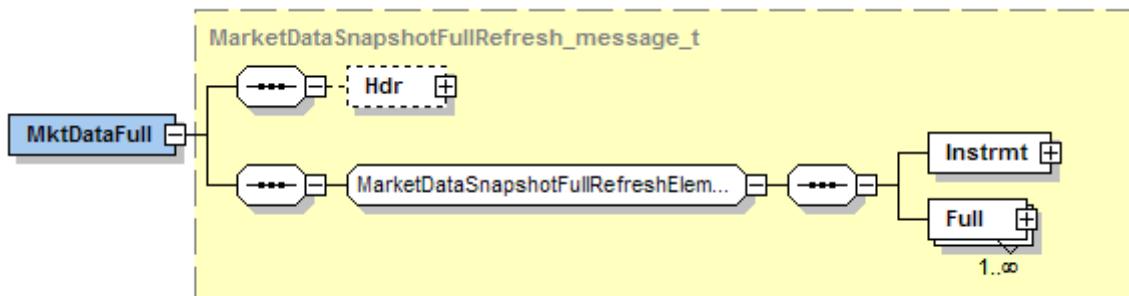

FIX Message:	Market Data Snapshot Full Refresh Report
Subscription Options:	Underlying Composite Equity Option
Delivery Options:	Batch File

### Overview

Early Composite Underlying Price information is available on the Market Data Snapshot Full Refresh (Market Data Full) Report. These prices are extracted from the price vendors at a given time and written unedited into this report. These are not finalized prices.

One price message is created for each equity option. This message is available on a daily basis.

### Message Structure

## Market Data Full – Final Composite Underlying Prices

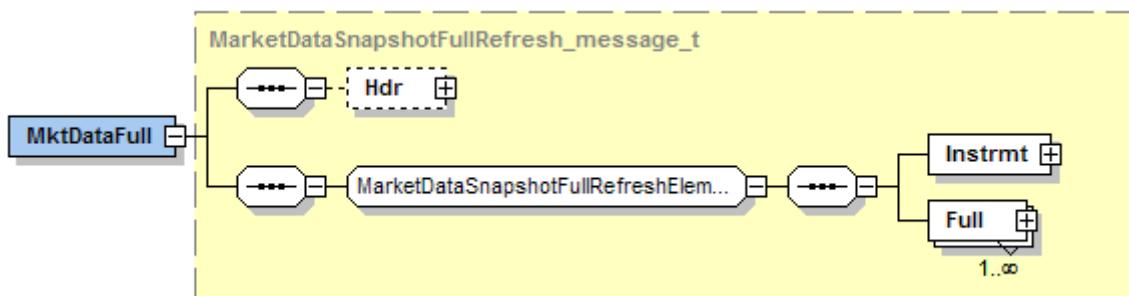

FIX Message:	Market Data Snapshot Full Refresh Report
Subscription Options:	Equity Options Index Options
Delivery Options:	Batch File

### Overview

Finalized composite underlying price information is available on the Market Data Snapshot Full Refresh (Market Data Full) Report. A price message is created for every active OCC Cleared Option Series in the database. These prices are final published option composite prices.

One price message is created for each equity option and index option. This message is available on a daily basis.

### Message Structure

## **Implementation Considerations**

### **General**

All Option Final Underlying Composite Price Reports include flex options for their respective product set. For example, the Equity and Index Option Composite Price transmissions include prices for both standard and flex equity/index options.

### **The Full Block**

The <Full> block for Option Composite Price records breaks down as follows:

Instance #1 – Finalized, edited, published option composite price

Optional

Instance #2 – Maturity Date (MatDt) only displays for underlying composites with expiring contracts.

Instance #3 – Finalized, edited, published, settle on open price. (Settle on open price is provided for options which are expiring today.)

**Note:** For Binary Series, the VWAP price is displayed when Market Data Type = 4 (Typ = "4").

This block is present for Settle on Open Series under the following conditions:

- Flex Series or Special Dated Options → Current Business Date = Expiration Date
- Standard Series or Binary Series → Next Business Date = Expiration Date

---

## **Appendix A**

### **Product Multipliers in DDS**

#### **Strike Multiplier (tag name StrkMult)**

The strike multiplier is a number that identifies where the decimal for a strike price should be. For example, for a strike of \$1,000, a multiplier of 0.1 indicates that the strike is \$100.

The Strike Multiplier is always 1.0 for Equity Options, is usually 1.0 for Index Options, but is 0.1 for “half-point” Index Options.

#### **Strike Value (tag name StrkValue)**

The Strike Value is a number that the user defines for 1 unit of strike value.

For example, if the strike value = 100, then a strike of \$17 equals \$1,700. This field is used for calculating extended strike values.

The number of units represented by the Strike Value is comprised of:

- 1) Number of shares for Equity Options
- 2) A dollar amount for Index Options

The typical value of this multiplier for Equity and Index options is 100.

The Strike Value in DDS accounts for products with multiple delivery components.

#### **Trade Value (tag name Mult)**

The Trade Value is a number that the user defines for 1 unit of trade premium value.

For example, if the trade value = 100, then a premium of \$1.50 equals \$150. This field is used for calculating premium money extensions.

The number of units represented by the Trade Value is comprised of:

- 1) Number of shares for Equity Options
- 2) A dollar amount for Index Options

The typical value of this multiplier for Equity and Index options is 100. In the majority of cases, the Trade Premium has to be extended to the same base as the Strike Price. Therefore, the Trade Value is usually the same as the Strike Value.

## **Product Multipliers in Extended Value Calculations**

### Extended Strike Calculation

DDS method of calculating extended strike:

extended strike price = strike price \* strike multiplier \* strike value

### Extended Trade Premium Calculation

DDS method of calculating extended premium:

extended trade premium per contract = trade premium \* trade value \* no. of contracts

## **Product Examples**

### Standard Equity Option

Symbol = **IBM**

Strike Price = \$75

Trade Premium = \$3.25

No. of contracts = 25

#### **DDS:**

Strike Multiplier (StrkMult) = 1.0

Strike Value (StrkValu) = 100

Trade Value (Mult) = 100

Extended Strike Price (DDS) =

strike price \* strike multiplier \* strike value = \$75 \* 1.0 \* 100 = **\$7,500**

Extended Trade Premium (DDS) =

trade premium \* trade value \* no. of contracts = \$3.25 \* 100 \* 25 = **\$8,125**

### Equity Option After a 3-for-2 Stock Split

Symbol = **YIW**

Strike Price = \$35

Trade Premium = \$2.75

No. of contracts = 25

#### **DDS:**

Strike Multiplier (StrkMult) = 1.0

Strike Value (StrkValu) = 150

Trade Value (Mult) = 150

Extended Strike Price (DDS) =

strike price \* strike multiplier \* strike value = \$35 \* 1.0 \* 150 = **\$5,250**

Extended Trade Premium (DDS) =

trade premium \* trade value \* no. of contracts = \$2.75 \* 150 \* 25 = **\$10,312.50**

### Standard Index Option

Symbol = **DJX**

Strike Price = \$76

Trade Premium = \$1.50

No. of contracts = 25

#### **DDS:**

Strike Multiplier (StrkMult) = 1.0

Strike Value (StrkValu) = 100

Trade Value (Mult) = 100

Extended Strike Price (DDS) =

strike price \* strike multiplier \* strike value = \$76 \* 1.0 \* 100 = **\$7,600**

Extended Trade Premium (DDS) =

trade premium \* trade value \* no. of contracts = \$1.50 \* 100 \* 25 = **\$3,750**

### Mini Index Option

Symbol = **QCE**

Strike Price = \$125

Trade Premium = \$1.50

No. of contracts = 25

#### **DDS:**

Strike Multiplier (StrkMult) = 1.0

Strike Value (StrkValu) = 10

Trade Value (Mult) = 10

Extended Strike Price (DDS) =

strike price \* strike multiplier \* strike value = \$125 \* 1.0 \* 10 = **\$1,250**

Extended Trade Premium (DDS) =

trade premium \* trade value \* no. of contracts = \$1.50 \* 10 \* 25 = **\$375**

---

## Appendix B

### Revision History

Version	Date	Version Updates
3.6	9/6/2013	<ul style="list-style-type: none"><li>Updated Security List – Option Series layout and sample message to add Evnt block for closing only designation.</li><li>Updated Security List Update – Option Series to modify layout and sample message to add Evnt block for closing only designation.</li><li>Added Appendix B - Revision History</li></ul>
3.7	2/7/2014	<ul style="list-style-type: none"><li>Updated the Eligible Securities Report layout Sym block to indicate that OCC removes dollar signs from security symbols that are received from IDSI.</li><li>Updated the Eligible Securities Report layout MktSegGrp block to appear as a component rather than as a subcomponent.</li></ul>
